Vision

When undergoing cataract surgery, you may have the option to correct presbyopia, a normal age-related condition that makes it difficult to see things up close.

Everyone gets presbyopia as they get older—typically becomes noticeable after the age of 45—but it is possible to get uninterrupted, high-quality vision again with TECNIS PureSee™ IOL.^{1,2}

PURE QUALITY VISION

See every detail of life,
day and night

When you get cataract surgery, your cataract isn't just removed—it is replaced by a small, soft lens called an *intraocular lens*—or *IOL* for short. You won't be able to feel or see the IOL, but it will stay inside your eye to help you see clearly.

PRESBYOPIA

Age
45

Typically becomes noticeable around the age of 45¹

Makes it difficult to focus on things up close (near vision)

Can be addressed with a presbyopia-correcting IOL

Other solutions include reading glasses, contacts or an additional surgery

TECNIS PureSee™ is a new IOL with continuous-power technology, designed to help you live an active life with high-quality vision.

Unlike other lenses that provide focus at one or two points, the **TECNIS PureSee™** IOL can deliver uninterrupted clarity across your full range of vision, even in dim light.^{2,3}

With presbyopia

With **TECNIS PureSee™** IOL

BENEFITS OF TECNIS PURESEE™ IOL

Provides excellent distance vision for reading street signs and intermediate vision for the computer, with improved near vision.²

Supports continuous, crisp, high-contrast vision which can be helpful in low-light scenarios.^{2,3}

Gives you sharp, continuous vision day and night, with a low level of distracting visual symptoms. You may still need reading glasses for small print.²

Talk to your doctor about what you want to see more of, and find out if TECNIS PureSee™ IOLs are right for you.
